

AsymmFlow

Enterprise ERP for Trading & Distribution

Your Data. Your Machine. Your Rules.

AsymmFlow is a sovereign, offline-first ERP system purpose-built for trading and distribution companies across India. It runs entirely on your hardware - no cloud dependency, no recurring subscription, no vendor lock-in - with optional multi-device sync when you need it.

Designed for companies serving government departments, public sector undertakings, and large industrial clients who demand airtight traceability, regulatory compliance, and the assurance that their business data never leaves their control.

53	6	70+	5	<35 MB
Business Screens	Integrated Hubs	Secured Functions	User Roles	Single-File Install

At a Glance

Architecture	Desktop application - installs in seconds, no server infrastructure required
Database	Local-first storage with optional cloud sync for multi-location operations
Compliance	E-invoicing framework, configurable tax return export, document integrity verification
AI	Butler Intelligence - natural language queries, OCR document processing, predictive analytics
Security	Role-based access control (5 roles), device-bound licensing, 70+ permission-guarded functions
Deployment	Single file - Mac (32 MB) or Windows (35 MB). No installer, no dependencies, no IT overhead.

Six Integrated Hubs

Sales Hub

Full opportunity pipeline, RFQ processing, costing sheets with margin enforcement, five quotation document types, PDF on letterhead, one-click costing-to-offer conversion, customer order lifecycle, win-rate analytics.

Finance Hub

P&L and balance sheet dashboards, invoicing with integrity hashing, credit notes, e-invoicing, tax return export, bank reconciliation, book-bank reconciliation, cheque register, cash position, FX revaluation, general ledger, A/R aging, cash flow projection.

Operations Hub

Multi-currency purchase orders with approval thresholds, GRN with QC inspection, delivery notes with serial allocation, end-to-end serial traceability PO to GRN to DN to Invoice, warranty tracking, 3-way matching, shipment management.

Relationships Hub

360-degree customer and supplier profiles, KPI dashboards, contact management, supplier invoice verification, automated deduplication, configurable customer grading.

Intelligence Hub

Butler AI: natural language queries across your dataset, OCR document analysis with drag-and-drop, conversation persistence, interactive data visualisations, predictive analytics, automated PDF report generation.

Administration

License-based activation with device binding, user and role management, audit trail, cloud sync configuration, automated backup with integrity verification on every startup.

Sales & Finance Capabilities

Sales Pipeline

Capability	Detail
Opportunity Mgmt	Full pipeline with configurable stages: Qualified, Proposal, Quoted, Won, Lost
RFQ Pipeline	Multi-product line items, stage progression, win rate tracking, folder organisation
Costing Sheets	Margin calculations with configurable minimum enforcement and advance payment rules
5 Document Types	Quotation, Budgetary Quote, Estimate, Technical Proposal, Commercial Proposal
PDF Generation	Company letterhead, annexure pages, serial listings, dynamic tax labeling
Offer Conversion	One-click costing-to-offer preserving all terms, pricing, delivery terms, metadata
Hidden Charges	Internal cost adjustments affecting margin only - never on customer documents
Pipeline Analytics	Year-wise value tracking, stage distribution analysis, owner-level performance
Customer Orders	Full order lifecycle - creation, status tracking, order-to-invoice pipeline

Finance & Compliance

Capability	Detail
Financial Dashboard	Revenue, gross profit, net profit, cash position with year-over-year indicators
Balance Sheet	Current/non-current assets, liabilities, equity with visual bar charts
14 Financial Ratios	Liquidity (Current, Quick, Cash), Solvency, Efficiency (DSO/DIO/DPO/CCC), ROA/ROE
A/R Aging	Current, 30-60, 60-90, 90+ day buckets with overdue percentages
Cash Flow Projection	Forward-looking projections based on receivables, payables, collection probability
Customer Invoicing	Create from orders, PDF with serial numbers, status pipeline, integrity hashing
E-Invoicing	Structured electronic invoice generation - adaptable to GST and intl standards
Tax Return Export	Periodic CSV with configurable exclusion filters (cancels, voids, proforma, drafts)
Credit Notes	Draft > Issued > Applied workflow with row-locked over-crediting prevention
Payments	Record against invoices, partial payments, KPI dashboard, balance reconciliation
Bank Reconciliation	PDF/CSV statement import, automated matching, manual matching, verification
Book-Bank Recon	Side-by-side balance comparison, adjustments tracking, variance analysis
Cheque Register	Full lifecycle: Issued > Presented > Cleared > Stale > Bounced
Cash Position	Real-time balances across accounts, multi-currency, outstanding cheque tracking
FX Revaluation	Exchange rate management, unrealised gain/loss, multi-currency exposure analysis
General Ledger	Complete GL with journal entries, chart of accounts, transaction history
Document Integrity	HMAC-SHA256 hashes on invoices and credit notes - tamper-evident verification

Operations, Intelligence & Security

Operations & Supply Chain

Capability	Detail
Purchase Orders	Multi-currency, enforced state machine (Draft to Closed), configurable approval thresholds
Goods Received Notes	Create from POs or standalone, QC status (Pending/Passed/Failed/Partial), serial capture
Delivery Notes	Serial allocation with atomic availability check, enforced status guards
Serial Traceability	Full lifecycle: PO > GRN > Inventory > DN > Delivery > Invoice > Customer
Warranty Tracking	Auto-calculated end dates on delivery, calibration certificate attachment
3-Way Matching	Supplier invoice verified against PO and GRN - visual match status indicator
Shipment Mgmt	Pending, in-transit, delivered tracking with delivery confirmation workflow

CRM & Relationships

Capability	Detail
Customer 360	Orders, invoices, contacts, notes, AI predictions - unified customer view
Supplier 360	Purchase orders, invoices, payment history - complete supplier lifecycle
KPI Dashboards	Year-over-year performance metrics for customers and suppliers, dynamic filtering
Contact Management	Multiple contacts per entity with role designation and communication tracking
Customer Grading	Configurable A/B/C/D grading with grade-based payment term enforcement
Data Quality	Automated deduplication, name normalisation, variant matching, orphan identification

Intelligence & AI

Capability	Detail
NL Queries	Ask business questions in plain English across your entire dataset
OCR Processing	Drag-and-drop document analysis with entity extraction and line item recognition
Conversation History	Persistent chat context - resume any prior business inquiry
Data Visualisation	Interactive D3 graphs, entity relationship mapping, force-directed layouts
Predictive Analytics	Win probability scoring on pipeline opportunities using historical patterns
Report Generation	Automated PDF reports on company letterhead - one-click export

Security & Access Control

Layer	Detail
Authentication	Device-bound license keys with cryptographic generation, master key for admins
Authorisation	5 roles (Admin/Manager/Sales/Operations/Staff), permissions on 70+ functions
Data Protection	HMAC-SHA256 document integrity, hashed tokens, PBKDF2 key derivation
Input Security	SQL injection, XSS, path traversal, and command injection prevention
Business Controls	Credit limits, approval thresholds, serial allocation guards, state machines
Audit & Recovery	Atomic backup every startup, integrity verification, session timeout, log rotation

Infrastructure

Offline-First	Complete functionality without internet - no exceptions, no degradation
Auto Backup	Atomic database backup every startup, integrity check, last 7 retained
Multi-Device Sync	Bidirectional cloud sync every 10 minutes across all business tables
Status Indicator	Real-time sync: Green (connected), Yellow (syncing), Grey (offline)
Graceful Shutdown	All operations complete before close - zero data loss risk
DB Performance	Write-ahead logging, 20 MB cache, 256 MB memory-mapped I/O
Log Management	50 MB rotation, 5 archived logs, automatic credential sanitisation

Market Positioning

Feature Comparison

Capability	Asymm	SAP B1	NetSuite	Odoo	Tally
Works fully offline	Yes	Partial	No	No	Yes
No subscription required	Yes	No	No	No	Yes
Data on your machine	Yes	Option	No	Option	Yes
E-invoicing support	Yes	Add-on	Add-on	Module	Yes
Tax return export	Yes	Partner	Config	Module	Yes
AI natural language queries	Yes	Extra	Basic	Module	No
OCR document analysis	Yes	No	No	Module	No
Serial traceability	Full	Yes	Yes	Yes	Basic
Document integrity hash	Yes	No	No	No	No
Multi-device sync	Yes	Yes	Yes	Yes	Yes
Costing with margin rules	Yes	Manual	Manual	Manual	No
3-way PO/GRN/Inv match	Yes	Yes	Yes	Yes	No
Single-file deployment	Yes	No	No	No	No
Implementation time	Days	3-6 mo	3-6 mo	1-3 mo	Weeks

Total Cost of Ownership (10 Users, 3 Years)

All figures in INR Lakhs

	Asymm	SAP B1	NetSuite	Odoo	Tally
Year 1 (w/ setup)	12.5	48.5	54.0	18.5	4.5
Year 2	0	24.0	20.0	10.5	1.0
Year 3	0	24.0	20.0	10.5	1.0
3-Year Total	12.5	96.5	94.0	39.5	6.5

Estimates based on published 2025-2026 pricing. SAP/NetSuite include typical implementation costs. AsymmFlow is a one-time deployment. Tally lacks advanced capabilities. Actual costs vary by partner and configuration.

Why AsymmFlow

vs. Enterprise ERPs (SAP / Oracle NetSuite)

6-8x lower three-year cost of ownership. No implementation consultants. No mandatory cloud. Same core capabilities - invoicing, procurement, traceability, reconciliation, reporting - without the enterprise overhead.

vs. Mid-Market (Odoo)

Comparable features at lower TCO. The decisive advantage is architecture: Odoo requires a server, a DBA, module configuration, and hosting. AsymmFlow is a single binary on any office laptop.

vs. Tally Prime

Same price range, fundamentally different capability. Tally lacks serial traceability, AI queries, costing automation, and RBAC. AsymmFlow is what Tally would be if rebuilt for modern Indian distribution.

Technical Specifications

Platforms	macOS (Apple Silicon + Intel), Windows 10/11 (x64)
Binary Size	32 MB (Mac), 35 MB (Windows)
Memory	~80 MB typical working set
Storage	~50 MB (app + 3 years of data)
Network	Optional - sync needs internet, everything else works offline
Updates	Binary replacement - no migration scripts, no downtime

For trading and distribution companies across India with 5-50 users:
Enterprise-grade ERP without enterprise-grade complexity or cost.
